

RISK ADJUSTMENT

WHO WE ARE

Granite GRC Consulting is a full-service governance, risk and compliance consulting firm providing trusted advice and support to organizations striving to maximize resources while managing risk.

We enhance your revenues, efficiencies and reputation through delivering creative, practical and strategic solutions to your most pressing challenges. By working

within your priorities and focusing our efforts where they bring the most value, we efficiently fine tune your operations while effectively helping you to avoid surprises by obtaining complete, reliable information that supports your strategic and day-to-day decisions. Working together, we produce consistently great results for you, your customers and your colleagues, while raising and protecting your profitability and bottom line.

Our Risk Adjustment Services

Medicare's risk adjustment-based reimbursement methodologies have the potential to bring great benefits to MA health plans, providers and patients. At the same time these programs require active administration and compliance overview, with requirements that are highly complex and fraught with hazards that can result in reduced quality of care, patient experiences, and lost reimbursement. Successful organizations consistently execute effective strategies and protocols to diligently administer the capture and submission of accurate and complete diagnosis information for each and every patient under the risk contracts.

Granite GRC's skilled professionals engage with MA plans and provider groups to analyze their claims data, review risk adjustment focused processes and audit medical documentation to identify gaps and address opportunities for improvement in the accuracy and completeness of clinical data. Our experiences drive our shaping of risk adjustment programs and training for our clients, using proven RA strategies, solutions and analytics for Medicare, Medicaid and commercial payors, accountable care organizations (ACO), and others participating in riskadjustment-based programs. Our mission is to improve reimbursement, patient care, and patient experiences. Among our skills, we:

- Apply advanced analytics to benchmark data and results
- Target observed weaknesses and trends to customize strategic pathways to success
- Apply experience and best practices to develop policies and protocols that drive patient and provider clinical engagement and results
- Fine-tune provider documentation and abstraction of codes from the medical record to improve medical coding and HCC recapture
- Address compliance requirements through focused solutions centered around accurate diagnosis reporting
- Investigate opportunities for improvement and make recommendations for risk adjustment focused processes
- Prepare for CMS and HHS RADV audits
- Support responses to outside inquiries and legal actions

Our Team

Granite GRC is a team of skilled professionals from across the business spectrum, with particular emphases in healthcare and the life sciences. As experienced leaders, we've cultivated success in a variety of regional, national and international companies. Our team has held positions on boards of directors and senior leadership teams involved with operations, accounting, finance and revenue cycles, risk mitigation and management, corporate compliance and privacy, and cyber security.
